

Agent 02 Content Repurposer

User Guide for the platform-specific content package UI

Updated: 2026-06-15 | Scope: Agent 02 v1 | Mode: draft-only

One-line summary

Agent 02 turns an approved long-form article or Agent 01 blog package into review-ready drafts for LinkedIn, Instagram, X/Twitter, short-video script, and optional newsletter/email.

1. What Agent 02 Is Trying To Do

Agent 02 helps marketers turn one approved source asset into channel-native drafts while preserving the original meaning. It is a repurposing agent, not a publishing tool.

- Input: raw article text or a serialized passed Agent 01 blog package.
- Optional strategy input: Agent 03 repurposing brief JSON.
- Output: platform drafts, review package, factual/usefulness/quality reports, hashtags, CTAs, notes, and cost.
- Boundary: it never posts, schedules, sends email, writes to a CMS/CRM/ad platform, scrapes, searches, or takes external actions.

2. What It Can And Cannot Do

Can do	Cannot do in v1
Adapt a source article into platform-specific drafts.	Publish or schedule posts.
Use Agent 03 campaign direction as strategy guidance.	Treat Agent 03 brief as factual source material by itself.
Create LinkedIn, Instagram, X/Twitter, short-video, and optional newsletter/email drafts.	Call social platform, CMS, CRM, ad, or email APIs.
Check factual consistency against the source.	Invent facts, statistics, or unsupported claims.
Stop before the Rs 30 package cost ceiling.	Bypass provider abstractions or cloud-neutral rules.

3. How The Repurposing Pipeline Works

- 1 Intake validates the source type, campaign fields, target platforms, and optional Agent 03 brief.
- 2 Validate source checks that the source is thick enough and, for Agent 01 packages, review-ready.
- 3 Parse source extracts usable text and source claims.
- 4 Core message and audience value are extracted from the source and campaign context.
- 5 The agent selects platform strategy and loads deterministic platform rules.
- 6 Platform drafts are generated through LLMPProvider, then finished and validated.

- 7 Factual consistency, usefulness, and quality review decide pass, revise, needs_human, or cost stop.
- 8 Finalize assembles the RepurposedContentPackage.

4. Output Statuses

Status	Meaning	What to do
pass	Quality score is at least 85, source meaning is preserved, and no hard-fail exists.	Review and manually publish outside the agent.
needs_more_input	The source is too thin or missing required content.	Add title, summary, source body, audience, goal, and CTA.
needs_human	A hard-fail or unrecovered quality issue remains.	Review hard-fail codes and improve source/campaign context.
stopped_cost_ceiling	The Rs 30 ceiling protected the run.	Use shorter source content or fewer platforms.
error	A config/provider/unexpected failure happened.	Check the terminal running uvicorn.

5. How To Start The UI In Live GCP Mode

```
Set-Location "C:\Users\Pranesh\Desktop\agents-platform"

$repo = (Get-Location).Path
$env:VERTEX_AI_PROJECT = "agents-platform-1212"
$env:PYTHONPATH = "$repo\packages;$repo\agents\agent-02-content-repurposer"

Set-Location "$repo\apps\agent-02-ui"
& "$repo\agent02-ui-venv\Scripts\python.exe" -m uvicorn app:app --host 127.0.0.1 --port 8002
```

Open <http://127.0.0.1:8002>. If a different server already uses that port, choose another port and open that URL.

6. How To Use The UI

- 1 Choose source type: Raw article text or Agent 01 blog package.
- 2 Fill Title. This is required; missing it causes an error before billable work.
- 3 Paste Summary and Full blog/article text. The source text remains the factual base.
- 4 Fill audience, brand tone, campaign goal, CTA, and target platforms.
- 5 Optional: paste Agent 03 repurposing brief JSON into the dedicated textarea.
- 6 Click Generate Package and review platform drafts, hard-fails, suggestions, validation reports, and cost.

Important handoff rule

Agent 03's repurposing brief guides strategy, hooks, tone, CTA, and platform direction. It does not replace the source article. Agent 02 still needs a title plus real source text or an Agent 01 package.

7. Working Raw Article Test Case

Use this as the minimum shape for a passing Agent 02 raw-article run. The important part is the Full blog/article text: it must be real source content, not only a topic, CTA, or Agent 03 strategy brief.

Source type: raw_article_text
Title: How AI Agents Help B2B Teams Scale Content
Summary: A practical guide to using AI agents for content planning, drafting, review, and repurposing without removing human editorial judgment.
Audience: B2B marketing managers
Brand tone: clear, practical, confident
Campaign goal: create review-ready social drafts from one approved article
CTA: Audit one repeatable content workflow this week.
Full blog/article text:
AI agents are becoming useful inside B2B content teams because they reduce the repetitive work that usually sits between strategy and a review-ready draft. A campaign often starts with scattered notes, sales-call themes, webinar transcripts, product positioning, and a few examples from past launches. Without a system, those inputs become a slow manual handoff. The team has to clarify the audience, choose an angle, build an outline, draft the piece, and then repurpose it for social channels.

The strongest use case is not replacing editors. The practical value is turning messy approved inputs into structured work that a human can review. An AI agent can normalize the source material, identify the main idea, propose a blog plan, draft the article, and prepare a quality report. A second agent can then repurpose the approved article into LinkedIn posts, short-video scripts, newsletter copy, and X/Twitter threads while preserving the original message.

This workflow gives marketing managers two advantages. First, it reduces handoff friction. Instead of asking every writer to interpret the same messy brief from scratch, the team starts from a consistent review package. Second, it improves governance. The agent can be instructed to avoid unsupported statistics, keep evidence placeholders visible, and flag content that needs human review before anything is published.

Human review remains essential. Editors still decide whether the angle is strong, whether the claims are useful, and whether the final draft matches the brand voice. The agent's role is to make that review easier by exposing the outline, CTA, assumptions, quality score, and cost. This keeps automation useful without pretending that the system has live market research or final publishing authority.

The best starting point is one repeatable workflow. Choose a common asset, such as a product webinar summary or founder POV article, and run it through a controlled draft-and-review process. Measure whether the team saves time, whether the message stays consistent, and whether the final output still feels specific to the audience. If that works, expand to more formats and campaigns.

8. Agent 03 Repurposing Brief Handoff

From an Agent 03 result, copy the JSON value at `package.repurposing_brief_for_agent_02` from `apps/agent-03-ui/runs/{run_id}.json`. Paste only that object into Agent 02's Agent 03 repurposing brief JSON field.

```
{
  "core_message": "AI agents help B2B teams scale content safely when humans keep editorial control.",
  "target_audience": "B2B marketing managers",

}
```

9. Cost, Quality, And Safety

- Hard ceiling: Rs 30/package.
- Pass threshold: quality score ≥ 85 and no hard-fails.
- Factual consistency should preserve the source meaning and avoid unsupported claims.
- Prompt injection and confidential/internal markers are guarded.
- Raw source text and drafts are not logged through telemetry.

10. Troubleshooting

Symptom	Likely cause	Fix
Title is required	Title field was blank.	Fill Title even when using an Agent 03 brief.
needs_more_input	Source body or summary is too thin.	Paste a fuller article, Agent 01 package, or approved source.
needs_human	Quality/factual/platform gate failed.	Read hard-fails and improvement suggestions.
No GCP provider	VERTEX_AI_PROJECT or ADC missing.	Set env vars in the same terminal and restart uvicorn.
Generic drafts	Source or campaign context is too broad.	Add audience, CTA, tone, source details, and Agent 03 strategy brief.

11. Where Files Live

Area	Path / behavior
Agent logic	agents/agent-02-content-repurposer/agent/
UI wrapper	apps/agent-02-ui/
Run JSONs	apps/agent-02-ui/runs/{run_id}.json
Config	agents/agent-02-content-repurposer/config/
Tests/evals	agents/agent-02-content-repurposer/tests/
